EXECUTIVE SUMMARY

Lead Software Engineer / Backend Engineer with 16+ years in digital banking and fintech, specializing in microservices, event-driven systems, and cloud-native architecture. Built high-availability platforms including treasury, payments, and compliance systems serving millions of customers globally.

CORE TECHNICAL SKILLS

Architecture & Design

- Solution Architecture: End-to-end system design, microservices architecture, SOA patterns, cloud-native design
- Integration Patterns: Event-driven architecture, messaging (Kafka, SQS, RabbitMQ), RESTful APIs, GraphQL, WebSockets
- Distributed Systems: CAP theorem, consistency patterns, fault tolerance, high availability (99.99% up time)
- Architecture Documentation: System design diagrams, C4 model, UML, data flow diagrams
- Design Patterns: Enterprise patterns (CQRS, Event Sourcing, Saga, Circuit Breaker, API Gateway)
- Security Architecture: OAuth2, JWT, encryption (KMS), PCI-DSS compliance, OWASP best practices

Banking & Financial Services Domain

- Digital Banking: Treasury management, liquidity forecasting, payment processing, settlement systems.
- Compliance & Risk: KYC automation, regulatory compliance, fraud detection, audit trails
- Payment Systems: Merchant APIs, transaction processing, multi-currency operations
- Financial Data: Real-time market data, securities integration, financial analytics

Backend Technologies & Frameworks

- Languages: Java, Kotlin, Python, SQL
- Frameworks: Spring Boot, Spring Cloud, Spring Security, Akka Framework
- Reactive Systems: Project Reactor & Akka Framework
- Databases: PostgreSQL, MySQL, Oracle, MongoDB, DynamoDB, RocksDB
- Caching & Search: Redis, Hazelcast, Elasticsearch

Front-end Technologies

- Frontend Frameworks & Libraries: React, Next.js, Redux Toolkit, Zustand
- Languages & Core Web: TypeScript, JavaScript (ES6+), HTML5, CSS3/SASS
- UI & Styling: Tailwind CSS, Styled Components, Material UI (MUI)
- Tools & Testing: Vite, Webpack, Jest, React Testing Library, Cypress, Git

Cloud & DevOps

- Cloud Platforms: AWS (ECS Fargate, Lambda, S3, DynamoDB, SQS, KMS, CloudWatch), GCP, OpenShift
- Containerization: Docker, Kubernetes, container orchestration, service mesh
- CI/CD: Jenkins, GitLab CI/CD, automated testing, deployment pipelines
- Monitoring: Grafana, Prometheus, ELK Stack, Splunk, AppDynamics, New Relic, OpenTelemetry

Agile & Leadership

- Methodologies: Agile, SCRUM, Kanban, sprint planning, retrospectives
- Team Leadership: Led cross-functional teams of 8+, mentoring, code reviews
- Stakeholder Management: Collaboration with product owners, business teams, third-party vendors
- Best Practices: TDD, CI/CD, secure coding, architectural governance

ORGANIZATIONAL EXPERIENCE

Senior Software Engineer | Revolut, UAE

April 2026 – Present

- Lead backend work on the Treasury Management Platform, partnering with Product Owners and the Head of Engineering on scope and deliverables.
- Implemented Kafka event streaming for real-time financial data processing at 500K+ events/day with exactly-once semantics.
- Data Sourcing & Integration: Spearhead the fault-tolerant sourcing of large-scale financial data, including global securities, third-party integrations, and real-time market data indicators.
- Environment: Java, Kotlin, Spring Boot, Kafka, PostgreSQL, Docker, Kubernetes, GCP, NewRelic, Grafana, Jira, Confluence.

Senior Engineer (Product R&D) | Confidential, UAE

April 2024 – April 2026

- Product Innovation: Act as a core hands-on contributor driving specialized product research and development across highly concurrent application modules.
- Built distributed microservices for highly concurrent application modules using Kotlin, Akka, and NATS. Focused on real-time streaming, low-latency state storage, and containerized production releases.
- State Management & Performance: Implemented high-throughput data layers leveraging RocksDB and PostgreSQL for low-latency state storage.
- Implemented **reactive systems** using Project Reactor, enhancing system responsiveness and scalability and performance"
- Environment: Kotlin, Akka Framework, NATS, WireMock, Gherkin, Cucumber, RocksDB, PostgreSQL, Docker.

Senior Software Engineer | American Express, Singapore

July 2019 – April 2024

Project: Mobile Consumer Banking App - Service Layer Architecture

- Designed the mobile banking service layer for millions of customers globally, with microservices architecture supporting millions of TPS, 99.99% availability, and <100ms latency. Led 15+ microservices, AWS cloud architecture, security, and team leadership across an 8+ developer team.
- Banking Domain: Architected account management, and transaction services for digital banking platform. Ensured PCI-DSS compliance, fraud detection integration, and regulatory audit requirements.
- Designed 15+ microservices with clear bounded contexts, implementing API Gateway pattern, service discovery, and inter-service communication strategies. Defined service contracts and versioning strategies.
- AWS Cloud Architecture: Architected cloud-native solution on AWS using ECS Fargate for container orchestration with auto-scaling based on CloudWatch metrics. Designed serverless event processing using Lambda, SQS for asynchronous messaging, DynamoDB for session management, and KMS for encryption key management.
- Defined event-driven integration patterns, implementing synchronous (REST APIs) and asynchronous (message queues) communication. Designed API gateway for security, rate limiting, and request routing.
- Security Architecture: Designed multi-layered security architecture with OAuth2 and JWT authentication, implementing zero-trust principles, encryption at rest and in transit, and OWASP security best practices.
- Team Leadership: Led cross-functional team of 8+ developers, conducting architecture reviews, code reviews, and enforcing architectural standards. Collaborated with product, design, and QA teams.

- Agile Practices: Led architecture discussions in SCRUM ceremonies, defined technical stories, and ensured alignment between business requirements and technical implementation.
- Environment: Kotlin, Ktor, Java, Spring Boot, AWS (ECS Fargate, Lambda, SQS, KMS), Redis, OAuth2, JWT, Docker, Jenkins, ELK Stack, Grafana.

Project: Merchant Payment APIs & Transaction Processing

- Payment Systems Architecture: Designed merchant transaction processing APIs handling millions of payment transactions daily. Architected batch processing system using Spring Batch for high-volume transaction reconciliation.
- Banking Integration: Designed integration with core banking systems, payment gateways, and merchant platforms, ensuring transaction integrity and settlement accuracy.
- Security & Compliance: Implemented Spring Security for authentication and authorization, ensuring PCI-DSS compliance for payment data handling.
- Environment: Java, Spring Boot, Spring Batch, Spring Security, DB2, JUnit, Groovy.

Sr. Staff Engineer (Technical Architect) | Equinix, Singapore

April 2018 – July 2019

- Designed analytics platform architecture for real-time ingestion, processing, and visualization. Built integration pipelines in Java and Python across Cassandra, Elasticsearch, and SQL databases, including ETL migration and transformation work.
- Integration Architecture: Designed data integration pipelines using Java and Python, implementing ETL processes to migrate and transform data across Cassandra, Elasticsearch, and SQL databases.
- Search Architecture: Architected Elasticsearch-based search solution, designing index strategies, query optimization, and aggregation pipelines. Led major version upgrades (ElasticSearch 1.x → 6.x, MongoDB 2.x → 4.x).
- Performance Optimization: Designed distributed caching strategy using Hazelcast, reducing database load and improving application response times.
- Environment: Java, Spring Boot, Angular, Python, Cassandra, Elasticsearch, MongoDB, Hazelcast.

Software Engineer / Technical Lead | American Express (USA) | Wipro | Zensar

2008 – 2018 (USA: Phoenix, Oregon, California | India: Pune)

- SOA Architecture: Designed service-oriented architecture for enterprise applications, implementing RESTful web services with Spring Framework and messaging integration using RabbitMQ and JMS.

- Financial Services: Developed banking and payment systems for American Express, implementing secure transaction processing and data replication architectures.
- Integration Patterns: Designed message-driven architectures for data replication from Oracle to MongoDB via RabbitMQ, implementing reliable messaging patterns.
- Enterprise Patterns: Applied enterprise design patterns (Business Delegate, Service Locator, DTO, Factory, Singleton) in J2EE applications.
- Team Leadership: Led onsite teams for client engagements, coordinating with offshore teams and managing technical deliverables.
- Environment: Java, Spring Framework, Hibernate, JPA, Oracle, MongoDB, RabbitMQ, JMS, WebSphere
